2222222222 goitre, hypoglycaemia, diabetes mellitus, endometriosis, pulmonary embolism and muscular dystrophy. Antibodies to disorders such as these can be made by providing a polypeptide of the invention to an immuno-competent vertebrate and harvesting blood or serum from the anaphylaxis, hepatitis, multiple sclerosis, cancer, coronary artery disease, malaria, atopic dermatitis, amyotrophic lateral sclerosis, meningitis, attention deficit disorder, Crohn's disease, gastroanteritis,

New isolated nucleic acid molecule for diagnosis, therapy of human and other animal disorder, or as regulating Mackay CR, 2001-308477/32. DB; AAU00670. cellular Myers PS, Kirst Fraser 3 Leiby KR; prevention, modulating agent for and

processes

This protein and similar others exhibit the ability to affect growth, proliferation, survival, differentiation, activity, morphology, or movement/majoration of, e.g. T cells and cells of the heart, liver, pancreas, placenta, brain, lung, skeletal muscle, kidney, spleen, lymph node, peripheral blood leukocyte, bone marrow or thymus tissue. They can be used as modulating agents for regulating cellular processes, thus the proteins and their associated nucleic acids can be used to proposition the provent, diagnose, or treat disorders associated with physiological The sequence represents a cDNA which encodes human TANGO 229 polypeptide Claim 1; Fig 1; 263pp; English

                                                                                                                                                                                                                                                                                                                                                                                        disease. The polynuc polities may also be used in screening for drugs effective in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nucleotide constructs encoding NHP products are used to genetically engineer host cells to express such products are used to genetically engineer host cells to express such products in vivo. These host cells allow for the identification of compounds that bind to NHP receptors or trigger
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence represents a polynucleotide which encodes a novel human protein (NHB) contraining a CUB domain (an extracellular domain). CUB proteins have been associated with regulating development, modulating cellular processes and preventing infectious disease. NHB nucleotide sequences are useful for gene therapy of physiological disorders or diseases. NHB pulliponucleotides are useful as hybridisation probes for screening libraries and assessing gene patterns. NHB nucleotide sequences are useful for detecting mutant or inappropriately expressed NHBs (for example, those proteins associated with obesity which blood pressure, connective tissue disorders and infertility) for the disposis of a financial connective tissue disorders and infertility for the disposis of a financial connective tissue disorders and infertility.
                                                                                                                                                                                                                                                                                                                                                       Sequence 1620 BP;

The sequence represents human TANGO 229 polypeptide. This protein and care in the shilling to affect growth, proliferation, convival, differentiation, activity, morphology, or movement/migration of, e.g. Teelis and cells of the heart, liver, panceas, placenta blood leukocyte, bone marrow or thymus tissue. They can be used a portion of the dispose, or treat disorders associated with physiological processes. Cand their associated nucleic acids can be used to promosticate, prevent, conditions, or treat disorders associated with physiological processes. These disorders include abnormal blood coagulation, sathma, anaphylaxis, can be partitis, multiple sclerosis, cancer, coronary artery disease, malaria, cateful disorder, croim's disease, gastroenteritis, goitte, hypoglycaemia, diabetes melitius, endometriosis, pulmonary embolism and comproviding a polypeptide of the invention to an immuno-competent correction of the providing a polypeptide of the invention to an immuno-competent coverbrate and harvesting blood or serum from the vertebrate.

to some of the reference alleles.

```
polymorphic stace as given in a table in the specification, selected from 92 single nucleotide polymorphisms in which the nucleotide at the polymorphic stee is different from a nucleotide at the same stee in a reference allele. The nucleic acids, and primers and probes, are used to identify polymorphisms, which may predispose an individual to disease, especially a vascular disease. They can also be used in penotype correlations, forensics, paternity testing, medicine or genetic analysis. AAY49500 to AAY49573 represent the proteins which correspond
                                                                                                                                                                                                                                              AAZ32159 to AAZ32194 represent reference alleles for specifically claimed nucleic acid sequences from the present invention which comprise

treating Factor 8

The present sequence is a human Factor 8 homologue (FBH), a coagulation cofactor which is selectively expressed in haematopoletic, heart and reproductive tissues. It has haemostatic and cerebroprotective activities. The FBH Contains a Factor 5/8 signature and is useful as a therapeutic for treating coagulation related diseases such as hemophilia and stroke. The nucleic acid is useful as hypridisation probe and amplification primer for detecting deficiencies in the level of FBH maken, for screening FBH gene mutations and for monitoring regulation of gene expression. Pragments of the nucleic acid are also useful as diagnostic probes and hyprogrammers, and can be used in screening methods such as those using DNA chips; The present sequence is also useful as a target to screen therapeutically useful modulators

The neuropilins, neuropilins-encoding nucleic acids, and unique portions also are useful in screening chemical libraries for regulators of semaphorin-mediated cell activity, and in genetic maphing as probes for related genes, as diagnostic respents for genetic, neurological, immunological and oncological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             shown to function in repulsive axon guidance. Sema III is a serveted protein that in vitro causes neumnal growth come collepse and chemograpulsion on neurites and is required in vivo

cancer associated nucleuc acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytastatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased educates and precisivity of p by expressing in a patient's genome that affect the activity of p by expressing in a patient's genome that affect the patients own production of P. Additionally, N may be used to produce the colon cancer-associated P, by inserting the nucleic acids into a bost cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal cardinomas and cancers. AAH37196 to AAH37204

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleuc acid molecules (N) and proteins (P), wher

coapulation factor VIII precursor - plg
c;Species: Sus scroia domestica (domestic pig)
c;Species: Il-dan-2000 #sequence_revision 11-dan-2000 #text_change 09-Jun-2000
C;Datus: Il-dan-2000 #sequence_revision 11-dan-2000 #text_change 09-Jun-2000
C;Accession: 742763
R;Collar P
submitted to the EMBL Data Library, August 1996
A;Reference number: 22269
A;Accession: 742763
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: mRNA
A;Residues: 1-213 < COL>
A;Rectendily: coasulation factor VIII discoldin I amino-terminal homology; ferroxida
C;Reywords: acute phase; blood coagulation, duplication; diyplostion; place phase; blood coagulation, duplication; glycoprotein; hemophilia A; p
F;10-2133/Product: coagulation factor VIII #status predicted <ANT>
F;20-313/Product: coagulation factor VIII #status predicted <ANT>
F;21-39/Commain: ferroxidase repeat homology <FOXI>
F;21-39/Commin : ferroxidase repeat homology <FOXI>
F;21-39/Commin : ferroxidase repeat homology <FOXI>
F;420-30/Commain: ferroxidase repeat homology <FOXI>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          on:
         Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                       299

SIMILARITY: CONTAINS 2 CUB DOMAINS.
SIMILARITY: CONTAINS 2 P5/8 TYPE C DOMAINS.
SIMILARITY: CONTAINS 1 MAM DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     UNCTION: HIGH AFFINITY RECEPTOR FOR SEMAPHORISS 3C, 3F, YESE-165
AND VEST-145 ISOFORMS OF VEST, AND THE PLGF-2 ISOFORM OF EGF.
SUBUNIT: NUMCOPILIN-2 PROBABLY FORMS AN HETEROMERIC COMPLEX WITH
RUMCOPILIN-1 IN ONDER TO BE A FUNCTIONAL SEMAPHORIN E RECEPTOR.
SUBCELLULAR LOCATION: Type I membrane protein.
ALTERNATIVE PRODUCTS: 6 ISOFORMS; A22 (SHOWN HERE), A0, A5, A17,
B0 AND B5; ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: EXPRESSED IN DEFELOPING CNS., PNS AND IN SOME
NONREURAL TISSUES INCLUDING LIMB BUDS. DYPELOPING BONES, MUSCLES,
INTESTINAL EPITHELIUM, KIDNEY, LUNG AND SUBMANDIBULAR GLAND.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DEVELOPMENTAL STAGE: THE EXPRESSION PATTERN IS VERY DYNAMIC IS DEVELOPMENTALLY REGULATED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PF00629; MAM; 1.

Gluzman-Poltorak Z., Cohen T., Herzog Y., Neufeld G.;
"Neuropilin 2 and neuropilin 1 are receptors for the 165-amino acid
form of vascular endothelial growth factor (VECF) and of placenta
growth factor 72, but only neuropilin 2 functions as a receptor for
the 145-amino acid form of VECF.";
i- FUNCTION: THE MEMBRANE-BOUND ISOFORM IS A RECEPTOR INVOLVED IN vi-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE=20309748; PubMed=10748121;
SOLUBLE/SNRP1 ISOFORMS DOES NOT SEEM TO OVERLAP. THE MEMBRANE-
BOUND ISOFORM IS EXPRESSED BY THE BLOOD VESSUS OF DIFFERENT
TISSUES. IN THE DEVELOPING EMBRYO IT IS FOUND PEDDMINNNTLY IN THE
MERWOUS SYSTEM. IN ADULT TISSUES, IT IS HIGHLY EXPRESSED IN HEART
AND PLACEMEN, MODERAFELY IN LUNG, LIVER, KELEFTAL MISCLE, KIDNEY
AND PLACEMEN, MODERAFELY IN LUNG, LIVER, KELEFTAL MISCLE, KIDNEY
AND PRACERSAS; AND LOW IN ADULT BRAIN. THE SOLUBLE/SNRP1 ISOFORM IS
FOUND IN LIVER HEPATOCYTES, KIDNEY DISTAL AND PROXINAL TUBULES.
SIMILARITY: BELONGS TO THE NUTWOPILLN FRAILY.
SIMILARITY: CONTAINS 2 CUB DOMAINS.
SIMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.
SIMILARITY: CONTAINS 2 THAN DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DEVELOPMENT OF THE CARDIOVASCULAR SYSTEM, IN ANGIOGENESIS, IN , FORMATION OF CERTAIN REURONAL CIRCUITS AND IN ORGANGENESIS OUTSIDE THE NEWFOUND SYSTEM, IT MEDIATES THE CHEMOREMENIS OUTSIDE THE NEWFOUND SYSTEM, IT MEDIATES THE CHEMOREPOUSANT ACTIVITY OF SEMAPHORINS. IT BINDS TO SEMAPHORIN 3A, THE PIGF-2 ISOSPON OF PGF, THE VEGF-165 ISOSPON OF VGF AND VEGF-B, COEXPERSION WITH KOR RESULTS IN INCREASED VEGF-165 BINDING TO AS WELL AS INCREASED CHEMOTAXIS. IT MAY REGULATE VEGF-INDUCED ANGIOGENESIS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ISOFORM IS SECRETED.

IT MEDIATES THE CHEMOREPULSANT ACTIVITY OF SEMAPHORIUS. IT SINDS TO SEMAPHORIN 3A, THE PLOCE? I SECORN OF PCEF THE VECEP-165 I ISOPORN OF VCEF AND VCEP-B. CORYRESSION MITH KOR RESULTS IN INCREASED VCEP-165 ENNING TO KOR AS MELL AS INCREASED CHEMOTAXIS. IT MAY REGULATE VCEF-INDUCED ANGIGENESIS (BY SIMILARITY).

1- SIBCELLULAR LOCATION: TYPE I membrane protecin.

1- TISSUE SPECIFICITY: FOUND IN THE EMBRYONIC MERYOUS SYSTEM.

1- SIMILARITY: CONTAINS TO THE MEDIAPOLINE FAMILY.

1- SIMILARITY: CONTAINS 2 CUB DOMAINS.

1- SIMILARITY: CONTAINS 2 FOR TYPE C DOMAINS.

'1- PUNCTION: COAGULATION FACTOR V IS A COENCTOR THAT PARTICIPATES
HITH FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.
'1- SUBUNIT: Pactor Val & composed of a heavy chain and a light chain, noncovalently bound. The interaction between the two child composed control of the chain.
                                                                                                                                                                                                                                                                                                                                                                                  Eukaryota; Metazoa;

PUNCTION. RECEPTOR INVOLVED IN THE DEVELOPMENT OF PROPERTY OF CERTAIN MEMONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NEWFOOLS CERTAIN MEMONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NEWFOOLS SYSTEM. IT MEDIATES THE CHEMORPOUSAND THE NEURONAL AEDCONITION BETWEEN THE OFFIC NERVE FIBERS AND THE VISUAL CENTERS.

1- SUBCELLULAR LOCATION: Type I membrane protein.

1- TISSUE SPECIFICITY: RETINAL GANGLION CELLS AND VISUAL CENTER
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Neuropilin-l recursor (A5 protein) (A5 antigen). Xenopus laevis (African clawed frog).

CARBIOVASCILVAE SYSTEM, IN ANGIOGENESIS. IN THE BREMATION OF
CRETAIN NEURONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NERVOUS
SYSTEM. IT MEDIATES THE CHEMOREULSANT ACTIVITY OF SEMARHORINS. IT
BINDS TO SEMARHORIN 3A, THE PLAP 2 ISONORM OF PGEP, THE VEGET-165
ISOPORM OF VERF AND VEGET-B. COEMPRESSION WITH KOR RESULTS IN
INVERNABLED VEGET-15 BINDING TO KER AS WELL AS INCREASED CHEMOTAXIS.
IT MAY REGULATE VEGET-INDUCED ANGIOGENESIS (BY SIMILARITY).
-: SUBCELLUIAR LOCATION: Type I membrane protein.
-: SIMILARITY: SELONGS TO THE NEUROPILIN FAMILY.
-: SIMILARITY: CONTAINS 2 CUB DOMAINS.
-: SIMILARITY: CONTAINS 2 CUB DOMAINS.

P.J.,

Cell. Nol. Life Sci. 58:148-159(2001).

- FUNCTION: Coagulation factor V is cofactor that participates
- in the factor X at oractivate prothrombin to thrombin.
- i- SUBUNIT: Factor Va is composed of a heavy chain and a light protein modeling of domains."; "Porcine factor V: cDNA cloning, gene mapping, three-dimensional protein modeling of membrane binding sites and comparative anato

anatomy

of

is calcium-dependent. chain, noncovalently bound. The interaction between the two

chains

DOMAIN: Domain B contains 41 x 9 AA tandem repeats. Domains C1 and C2 may be involved in membrane binding. PTM: Thrombin activates factor V protectlystically to the active coffector. factor Va (formation of a heavy chain at the N-terminus and a light chain at the C-terminus). STATIANTY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED 01 2 PLASTOCYANIN-LIKE REPEATS. ç
